

# How databases shape research: labial-velars distribution in Africa

Guillaume Segerer

ギヨーム・セジェレル

LLACAN (CNRS-INALCO) – FRANCE - フランス

# The experiment

Look at a relatively  
**well-known linguistic feature**  
through  
**online linguistic databases (ODBs)**

# Aims of the experiment

- Show how online databases differ
- Look at the consequences for research

and eventually

- Try to capture the nature of the areal distribution of labial-velar consonants in Africa

# The well-know linguistic feature

Presence vs absence of labial-velar consonants in the phonological inventory

- distribution already known (restricted to Africa - except Amele and Yeli Dnye, both in Papua New Guinea)
- apparently easy to decide

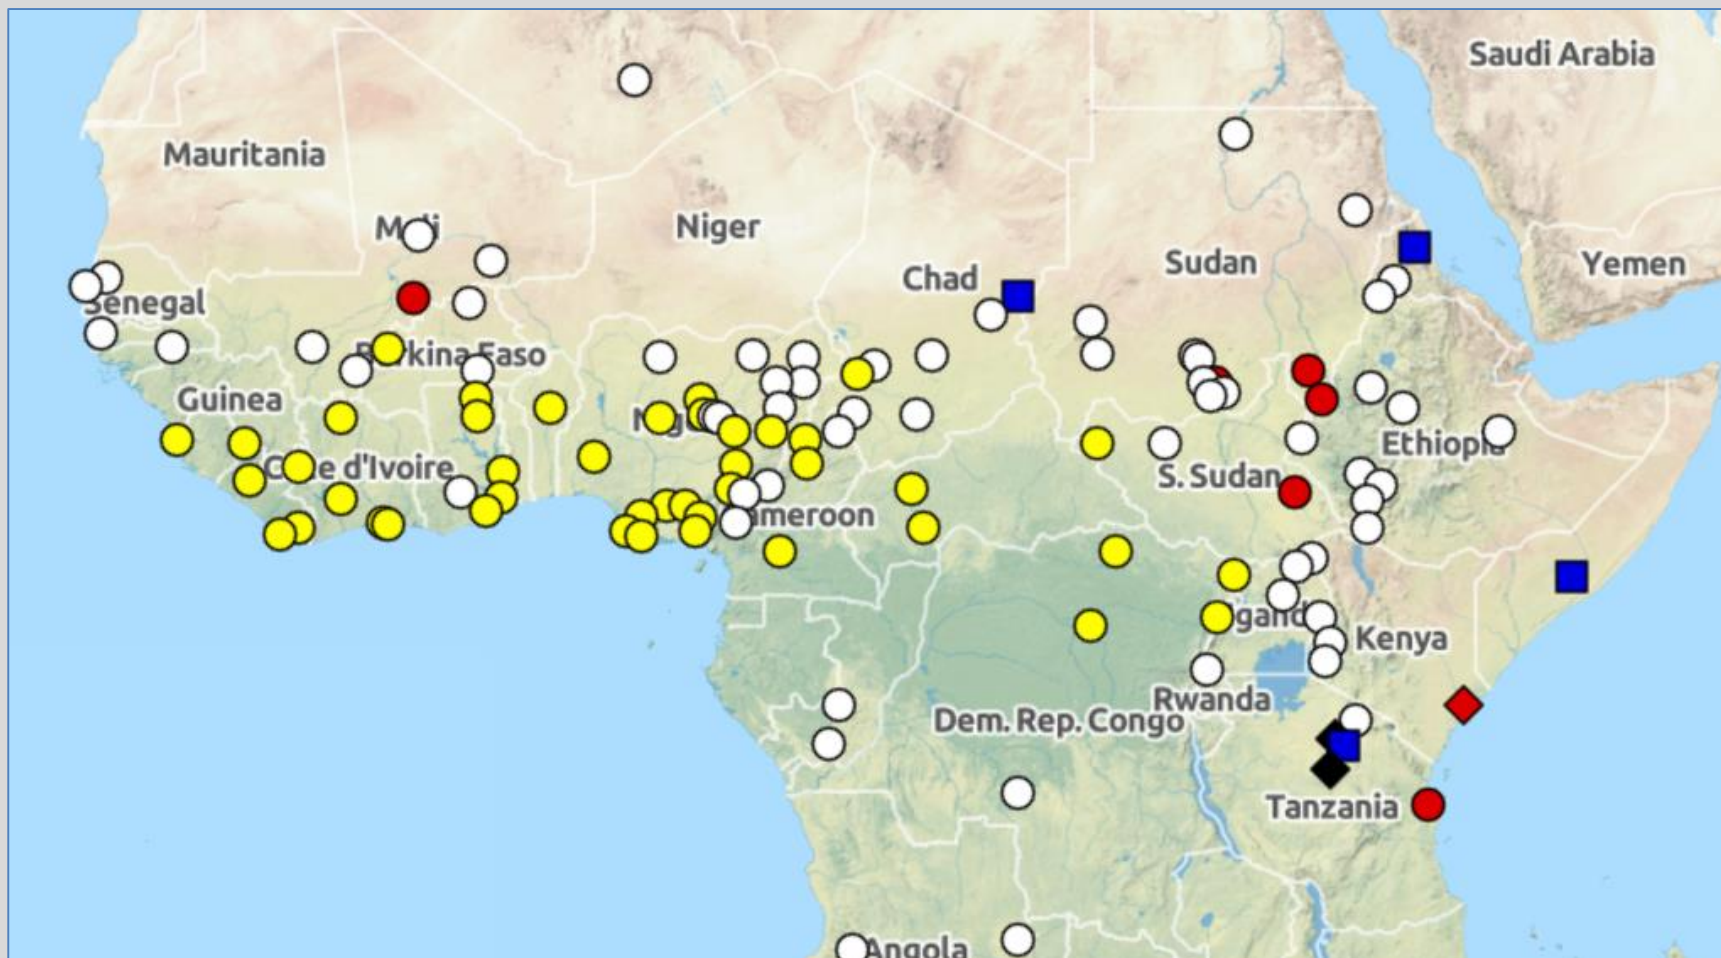

# The online databases

- WALS : <http://wals.info/>
- PHOIBLE : <http://phoible.org/>
- LAPSYPD : <http://www.lapsyd.ddl.ish-lyon.cnrs.fr/>
- RefLex : <http://www.reflex.cnrs.fr>

# LAPSYD: 14 lgs

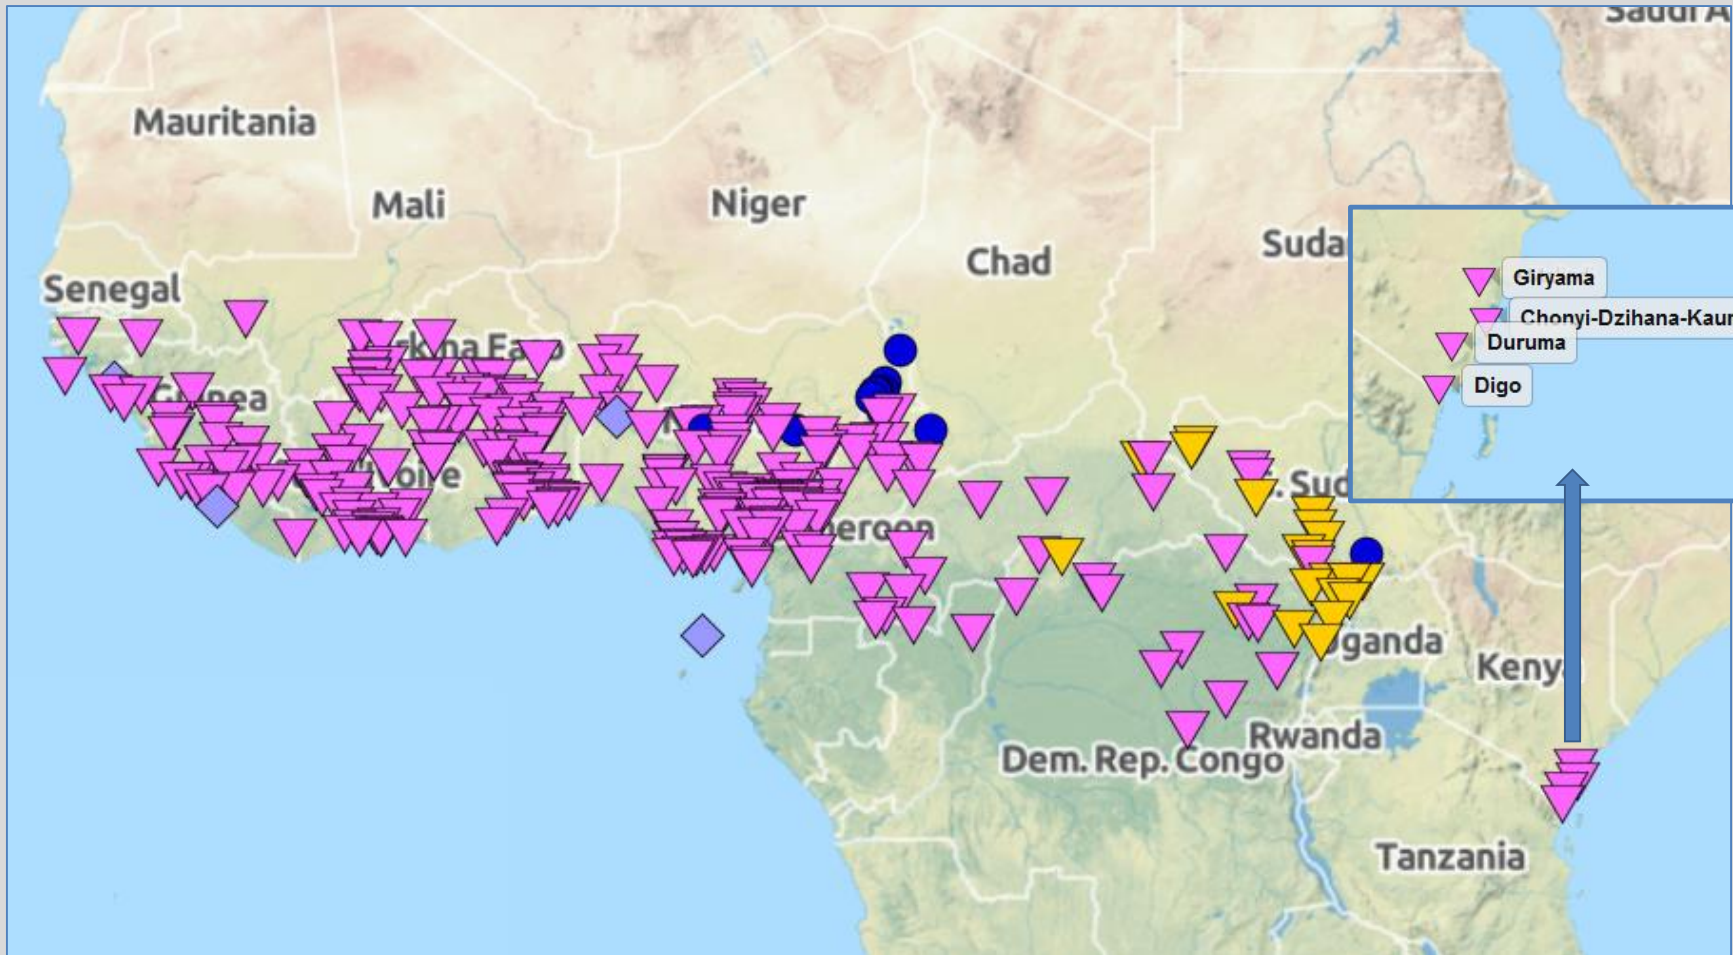

# WALS: 43 lgs (yellow)

Feature 19A: Presence of Uncommon Consonants

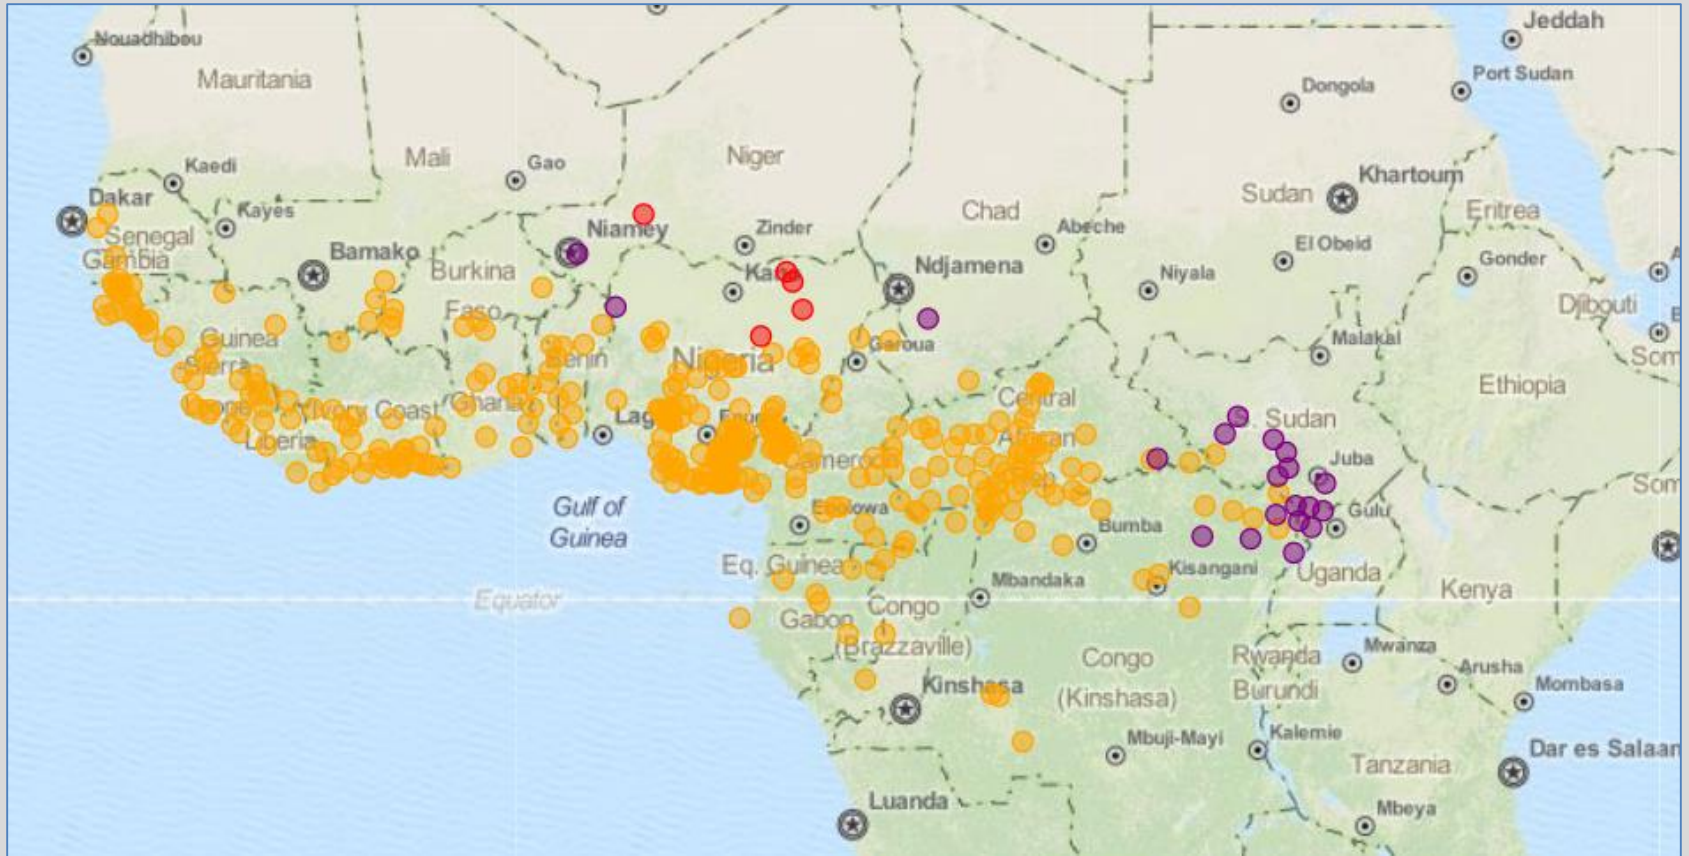

# PHOIBLE: 315 lgs

distribution of gb only (combined distribution of gb and kp impossible to display)

# REFLEX: 361 lgs

# DBs drawbacks for the current purpose

- LAPSYD : not suitable for quantitative analyses
- WALIS : misleading (we'll see why later)
- PHOIBLE : limited display possibilities
- RefLex : lexicon-based > needs manual tuning

- None of these have data on **ALL** lgs
- None of these can display lgs **WITHOUT** LVs

# Summary of the data

**552 languages**

(in the databases)

have labial-velar consonants

# Summary of the data

**552 languages**

	<b>PHOIBLE</b>	<b>RefLex</b>	
	191	237	428
		124	124
Total	315	361	<b>552</b>

# What you can get from databases

It depends on:

- What you are looking for
- What databases actually contain
- What databases allow you to look for

# Gaps in the data

- Hard to evaluate the exact number of missing languages
- Hard to evaluate if data is available for those languages

# Problems / Solutions

- False positives : Limba
- False negatives : Ikwere
- Inconsistencies : Fang
- Mistakes : Bassari (Ncam)

# Limba (NC, unclass.)

- Only 9 words (out of 4500) : dagba, hudigbo, kudagbala, kuligbi, kusagbi, kusegbi, kutagba, kutegebe, nalegbe
- Only gb
- Never stem-initial
- mostly class ku- nouns

>> probable borrowings (although the source could not be found yet)

# Ikwere (NC, Igboid)

- no LV in Phoible

BUT (Clements & Osu 2005):

- $\text{b}_\text{ɓ}$  and  $\text{ʔb}_\text{ɓ}$  are reflexes of \*gb and \*kp
- $\text{b}_\text{ɓ}$  and  $\text{ʔb}_\text{ɓ}$  are written gb and kp in the orthography

Should one include Ikwere in the list?

# Fang (NC, Bantu A75)

- kp & gb present in Phoible

BUT:

- no LV in Galley (1964)
- kp & ngb in Meguedo (1991)
- kp, ngb & nkp in Mba Nkoghe (1999)

# Bassari (Ncam)

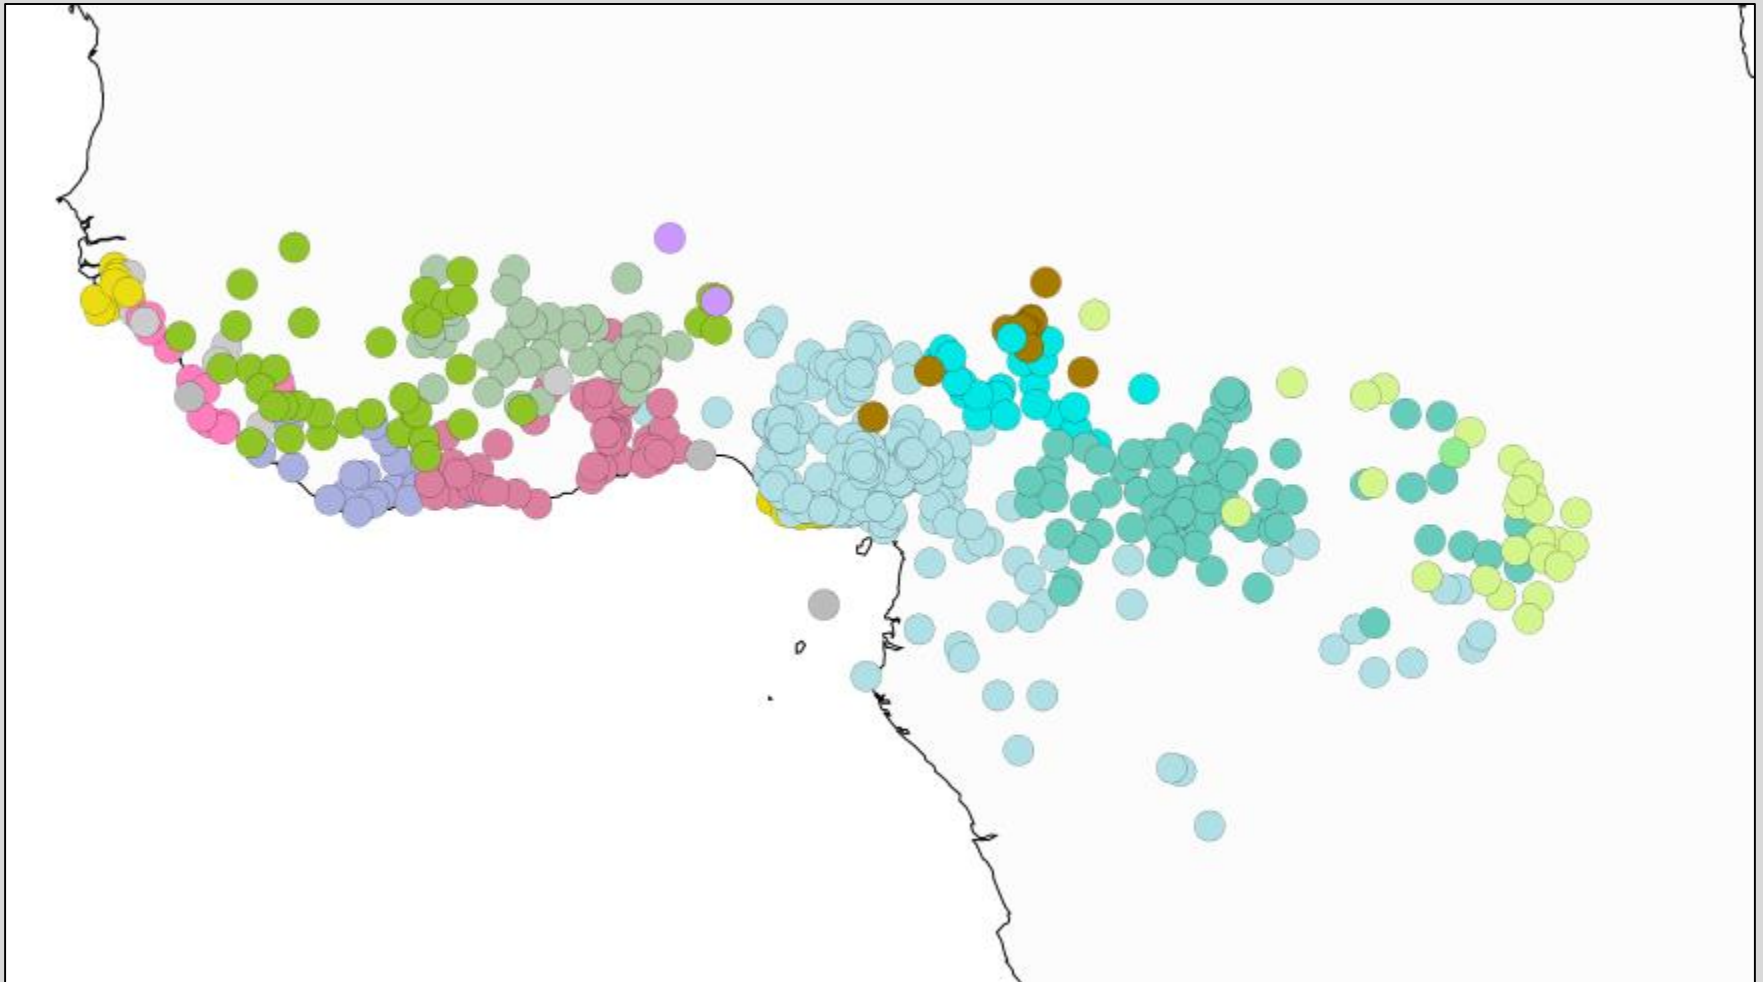

Two languages are known in the literature under the name Bassari:

- Bassari of Senegal (Onyan) : Atlantic
- Bassari of Burkina Faso (Ncam) : Gur

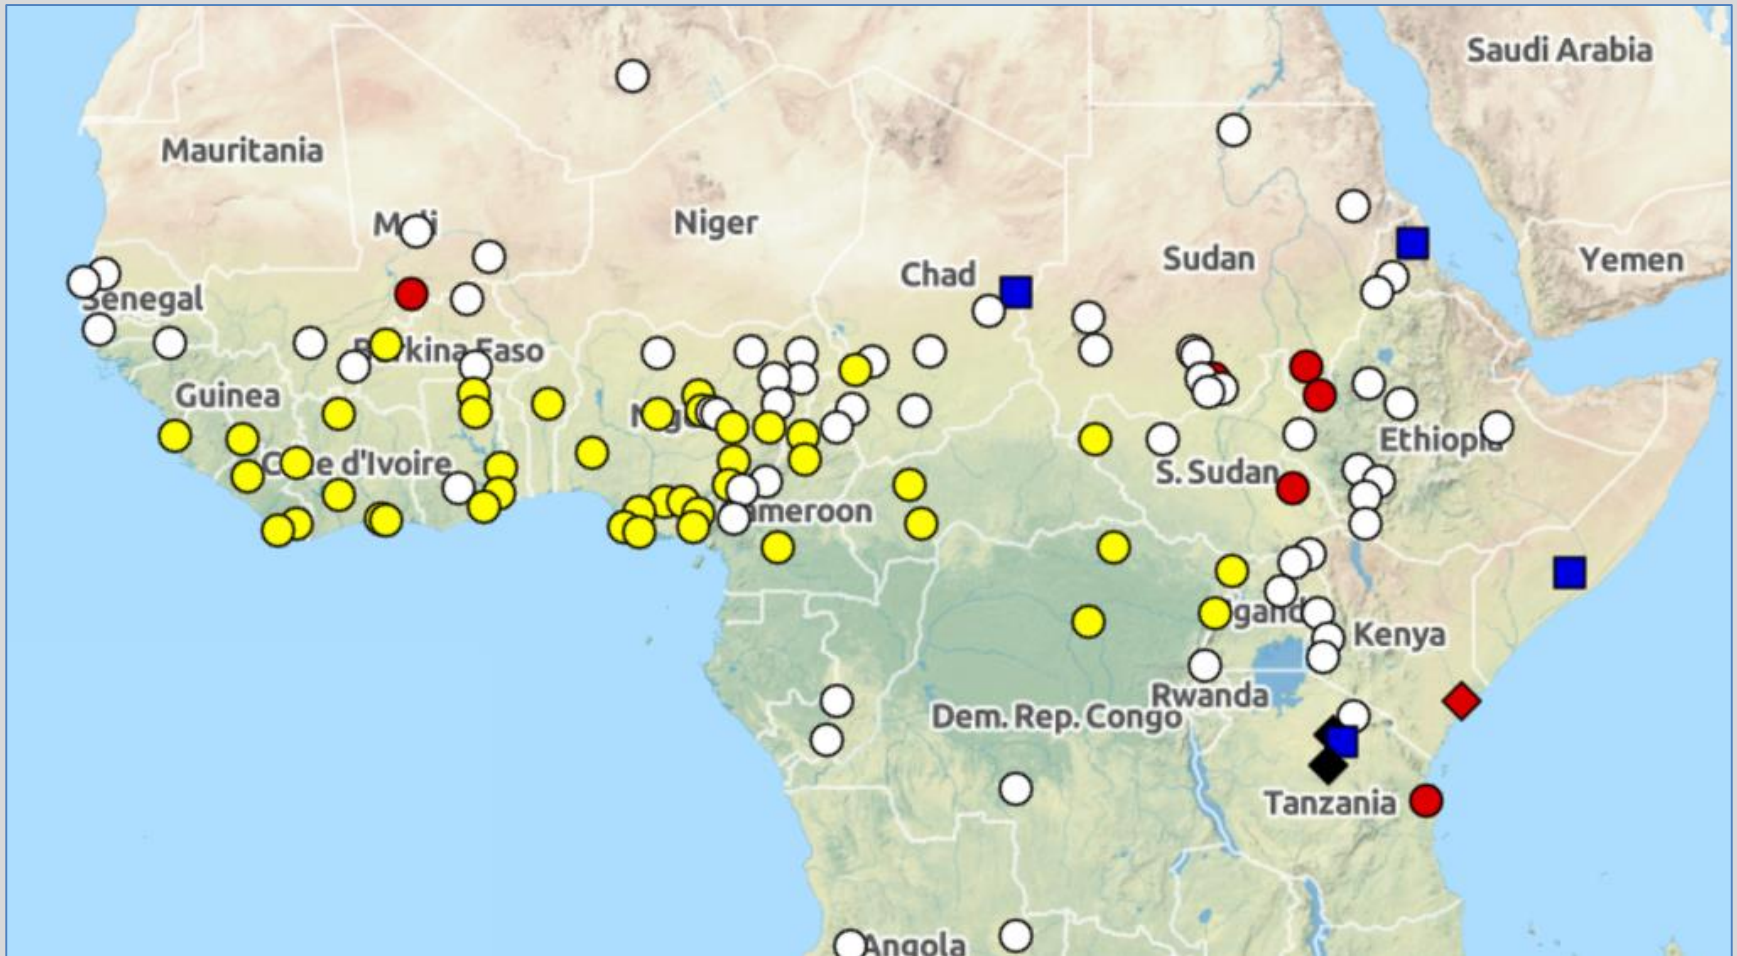

They are commonly mistaken.

In Phoible, the Ncam inventory is attributed to Onyan > Onyan is supposed to have **kp** and **gb**, which is **not** the case (Ferry 1968).

# Distribution of LV in Western Africa

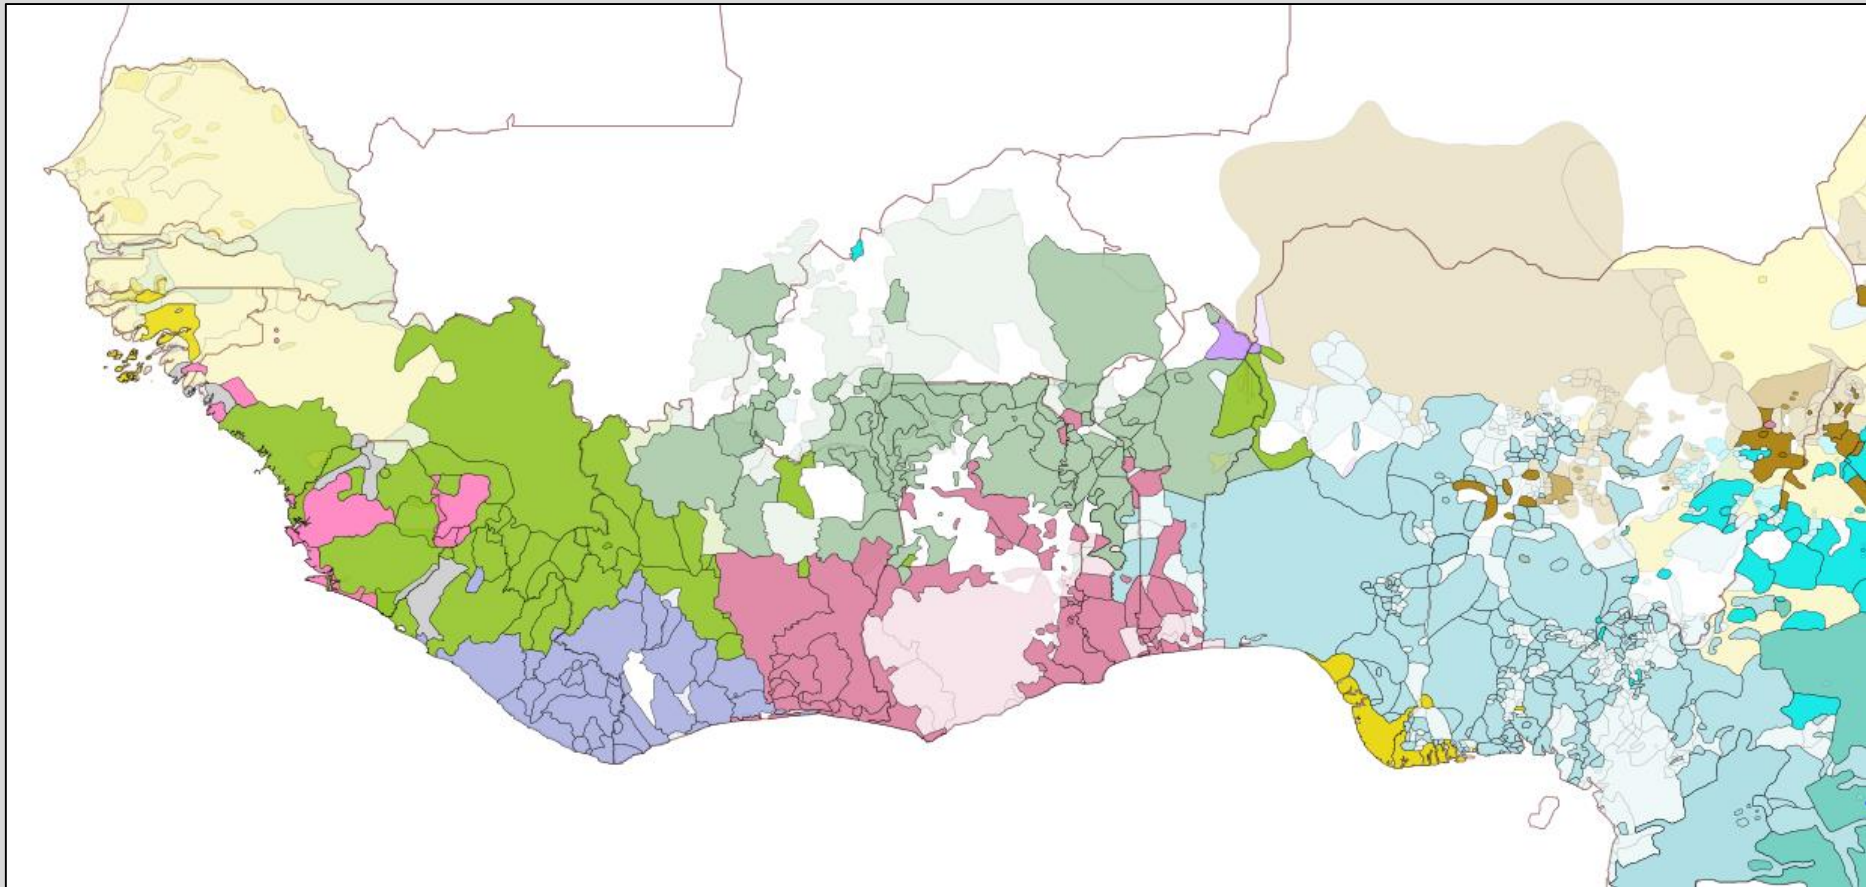

# WALS: 43 lgs (yellow)

Feature 19A: Presence of Uncommon Consonants

# Distribution of LV in Western Africa
