Egyptian non-selective interrogative pronouns: history and typology

Dmitry Idiatov
University of Antwerp
Center for Grammar, Cognition and Typology
Dmitry.Idiatov@ua.ac.be

Non-selective interrogative pronouns (NIPs): 'who?' & 'what?'

(1) a. Who is that man over there?
   b. Who gave you this?

(2) a. What is this thing you have in your hand?
   b. What fell out of his bag?

NIPs: from a typological perspective

For purposes of cross-linguistic comparison, NIPs, ‘who?’ and ‘what?’, are best defined through their functions in terms of prototypical combinations of values (cf. Idiatov 2007).

NIPs: from a typological perspective

Figure 1. Conceptual space for delimiting the prototypical functions of non-selective interrogative pronouns

• [person + classification + common noun] (KIND-questions)
  English
  (3) What is he actually? A doctor?

• [thing + identification + proper name] (NAME-questions)
  Kgalagadi (Niger-Congo, Bantu S30; Botswana; Kems Monaka, p.c.)
  (5) [A:] libizho la lebelo lo ke anye?
      name of place this is who
      [B:] ke Hukuntsi
      is Hukuntsi
      ‘[A:] What (lit.: ’who?’) is the name of this place? [B:] It’s Hukuntsi (a village name)’
Figure 2. Conceptual space for non-selective interrogative pronouns (in terms of prototypical and non-prototypical combinations of values and ‘who?’/’what?’-dominance)

Some complications:
- a language may choose a different strategy in different contexts even when the combinations of values in these contexts are the same
- many languages treat non-human living beings similarly to humans in various respects and some also use ‘who?’ in questions about them (animate-questions)

Russian
(6) Kto eto tebya ukusil? Osa?
who this you bit wasp
‘[Looking at a swelling on someone’s hand clearly caused by an insect bite:] What stung you? A wasp?’

‘Who?’/’what?’-dominance in cases of non-prototypical combinations of values: a typology

Lack of differentiation between ‘who?’ and ‘what?’

(7) a. Qui qu’est venu?
   who that-is come
   ‘Who came?’

b. Qui qu’tu manges?
   what that-you eat
   ‘What are you eating?’

Lack of differentiation

- Differentiation between ‘who?’ and ‘what?’ is not universal and although on a world-wide scale, lack of differentiation between ‘who?’ and ‘what?’ is not common, it is far from being as marginal as is often assumed.

131 (more) certain cases + 37 less certain cases

Languages allowing for a lack of differentiation between ‘who?’ and ‘what?’ can be found all around the world. However, the distribution is rather uneven, which points to areal influences and above all, genetic predispositions.

-australia & south america

-New guinea & north america

Lack of differentiation

- Languages may both lose differentiation between ‘who?’ and ‘what?’ and acquire it.

- ‘where?’ > ‘which one?’ > ‘who?, what?’
- ‘which one?’, ‘which/what [N]?’ > ‘who?, what?’
- [single interrogative root + gender-number marking] + peculiarities of the gender-number system > ‘who?, what?’
- constructions based on a noun meaning ‘name’ or verbs meaning ‘do, say, be’, ‘name’, ‘call’ > ‘who?, what?’
- ? filler (placeholder) meaning ‘what’s(t)sname’ > ‘who?, what?’
- ? language contact
Typology of NIPs: two parameters of variation

- formal differentiation of ‘who?’ and ‘what?’ or lack thereof
- functional differentiation of ‘who?’ and ‘what?’ in languages where they are distinguished formally

Questions:

- #1: How do Egyptian NIPs behave with respect to the typology outlined above throughout the recorded history of the Egyptian language?
- #2: How can we account for the attested shifts in the patterns of use of different NIPs and the development of new NIPs in the course of the history of the Egyptian language?
- #3: How do Egyptian data relate to the data from the other branches of the Afro-Asiatic phylum?

A caveat:

- The pre-Coptic Egyptian writing systems
- E.g., is m ‘who?, what?’ one interrogative or two with different vocalizations corresponding to different meanings?

...however, the probability of the latter situation seems to be rather low

- A given NIP is always rendered with the same sign(s) whether it means ‘who?’ or ‘what?’.
- At the very least, any difference possibly expressed by vowels was not lexical, ‘who?’ vs. ‘what?’ but grammatical of some kind, e.g., difference in case, the so-called “state”, focus, etc.
- Agreement patterns do not depend on whether the meaning of m is ‘who?’ or ‘what?’.
- More than one unrelated ‘who?, what?’ interrogatives are recorded.
- Comparative Semitic, and especially, Berber evidence.

Egyptian NIPs & formal differentiation between ‘who?’ & ‘what?’

- m ‘who?, what?’ (*/mi/ and/or */mi ~ ma/)
- zy ‘which [N], what kind of [N]?, which one?’ but in predicative use also as ‘who?, what?’
m 'who?, what?'

   s
   ‘who?, what?’
g. z
   t
   ‘who?, what?’
h. z
   n
   ‘who?, what?’
Forms & meanings of Egyptian NIPs: a historical overview

a. nm, nim(e) ‘who?’
b. ỉ ‘what?’

From m ‘who?, what?’ to nim ‘who?’

- Morphosyntactically, m behaves rather like a “dependent” pronoun in that it “is used mostly after other words” (Allen 2000:54), such as a preposition or a genitive marker and, a subject focus marker in, a verbal form, etc.
- Subject focus marker in + m ‘who?, what?’ → nim ‘who?’
- Subjects (esp. of transitive verbs) are normally high on the animacy hierarchy and frequently human
- Furthermore, according to Callender (1975:92), in declarative sentences, in tends to mark subject focus only with specific (definite?) subjects
- Higher referentiality correlates with higher animacy
- Competition with a specialized ‘what?’ NIP tp / tk-st

pw and pw-based NIPs

- The older form pw seems to be primarily ‘who?’ (Edel 1964:518), marginally probably also as ‘what?’ (Gardiner 2001:407)
- The later forms based on [pw + tr/ty/t ‘actually, forsooth, I wonder’] seem to be primarily ‘what?’, marginally also as ‘who?’
- p-w M.SG-DEM > NIP pw Gardiner (2001:406)
- In several Northern Berber languages, w-i M.SG-DEM > ‘who?’
- (Gardiner 2001:417, 48): in Old & Middle Egyptian “the meaning of the neuter” was preferably expressed by the feminine

Egyptian NIPs & functional differentiation between ‘who?’ & ‘what?’

- Old & Middle Egyptian seem to be of type 2(b) (ENTITY TYPE prominence):
  - ‘who?’ in KIND-questions
  - ‘what?’ in NAME-questions
  - ‘what?’ in ANIMATE-questions
- Late & Coptic Egyptian seem to be of type 3 (TYPE OF REFERENCE prominence):
  - ‘what?’ in KIND-questions
  - ‘who?’ in NAME-questions
  - ‘what?’ in ANIMATE-questions
Egyptian NIPs & functional differentiation between ‘who?’ & ‘what?’ (KIND-questions)

Late Egyptian

(1) ḫr nt n-n a n ʾām-m-n

who head-2SG.M.SUF N-DEM of Asian-ML.

‘What are these Asians for you?’ (Erman 1968:374 [1933])

Coptic Egyptian

(2) mḥq ʾw-w

2SG.M.INDF.ART.MSG-what

‘What are you?’ (Lambdin 1983:19, Till 1986:102 [1966])

---

Egyptian NIPs from an Afro-Asiatic perspective

- recurrent lack of differentiation between ‘who?’ and ‘what?’ such as found in older forms of Egyptian is also quite common in Berber. It is only sporadically attested in Semitic and Cushitic and seems to be absent in Chadic where ‘who?’ and ‘what?’ are lexicalized as separate roots.

- morphosyntactically predominantly “dependent” behaviour of ʾw resembles the situation in many Berber languages (e.g. Ait Ndir).

- as to functional differentiation between ‘who?’ & ‘what?’, Old & Middle Egyptian seem to be more like Berber, whereas Late Egyptian & Coptic more like Semitic in that they allow for ‘who?’ in NAME-questions & for ‘what?’ in KIND-questions.

‘What is John?’ (Seamun Mulugeta, p.c.)

---

Egyptian NIPs from an Afro-Asiatic perspective

- On the whole, the NIP system of Old & Middle Egyptian appears to be more Berber-like, whereas by the Late Egyptian period a shift to a more Semitic-like system appears to have occurred.
